SEAGUEST - THE SYSTEM

SEAGUEST - THE SYSTEM

In line with the demands of the day, the **SEAGUEST SYSTEM** is designed to fulfil access control jobs in hotels and pensions easily and quickly, helping with the serving of guests, and augmenting their sense of security.

Main advantages of the System

- ✓ Identification is implemented with programmable proximity tags.
- ✓ There is no wearing part as opposed to any conventional magnetic card system.
- ✓ Tags are specially encoded and re-programmable.
- ✓ The System is modular, ready for expansion or alteration any time.
- ✓ Flexible suite management.
- ✓ Low-consumption, designed **SEALOCK LYRA** hotel locks.
- ✓ Simple installation for little installation time requirement and reduced capital investment.
- ✓ Checkpoints off-line or on-line.
- ✓ The checkpoints can be combined with any kind of electronically controllable

electromechanic access blocking device (turnstile, revolving door, barrier or barrier system) as may fit in well with the setting.

- ✓ Hotline servicing at low costs.
- ✓ Designed to co-operate with other systems such as:
 - ✓ **SIS SEAWING INTEGRATED SOLUTION**,
 - ✓ **SWIMLINE** Spa System,
 - ✓ **FRONT OFFICE** systems,
 - ✓ **Number plate recognitions** systems, etc.

SEAGUEST - THE PROGRAM

The **SEAGUEST** program is designed to parametrize and supervise the access control system, keep records of guest details, and perform occupancy management. Matched with some front-office system, it is mostly used for issuing access tags in the background. Alternatively, it may as well stand alone for use in occupancy management in small-size hotels or pensions.

The program interface

A user-friendly graphic interface is available for quick and easy management of rooms and occupancy.

Handling specific access rights and services

The SEAGUEST program allows management of specific access rights as well as that of access opportunities to extra services subject to identification (such as use of parking area, strong-box, sauna, or access to a banquet-hall in case of a formal private event, etc).

Functions

- ✓ Parametrize the system
- ✓ Define access rights
- ✓ Record services
- ✓ Validate and issue access tags
- ✓ Keep logs of events and servicing jobs
